

Inference

Computed Model Parameters

Parameters that are not directly recorded by Statcast but instead calculated and maintained by PitchCraft internally for our model.

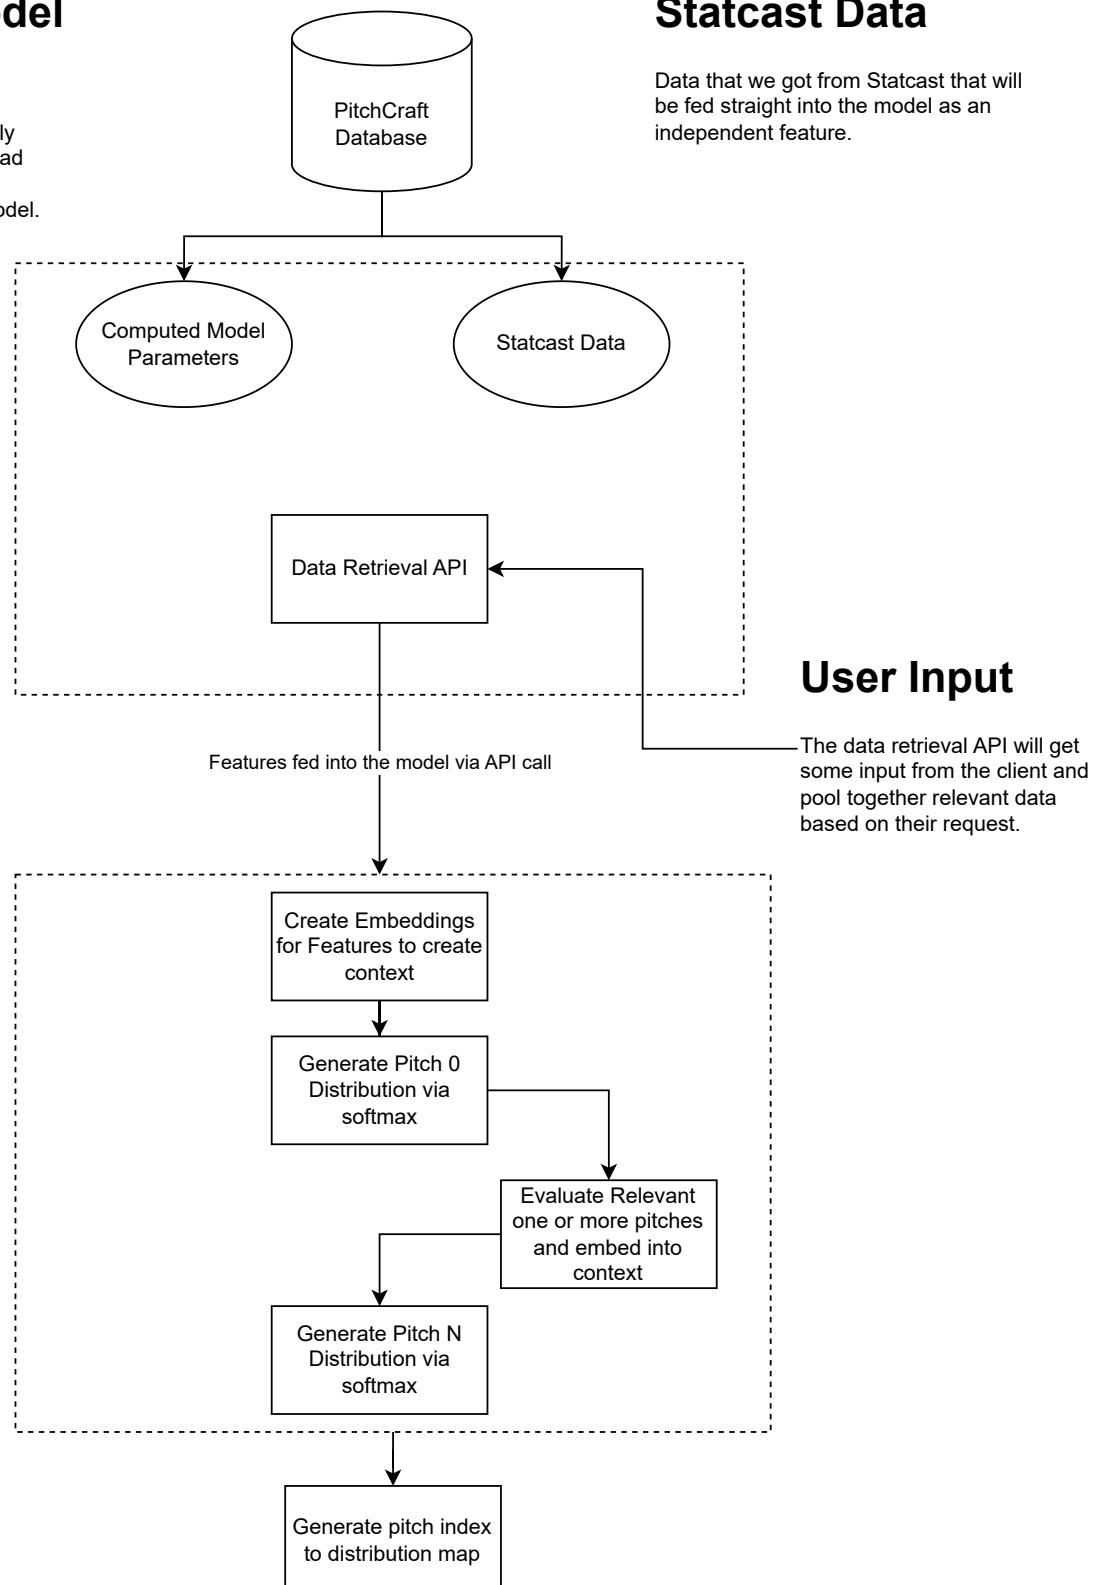

Statcast Data

Data that we got from Statcast that will be fed straight into the model as an independent feature.

Data Cleansing and Retrieval Service

User Input

Model Layer (Evaluation)

Training

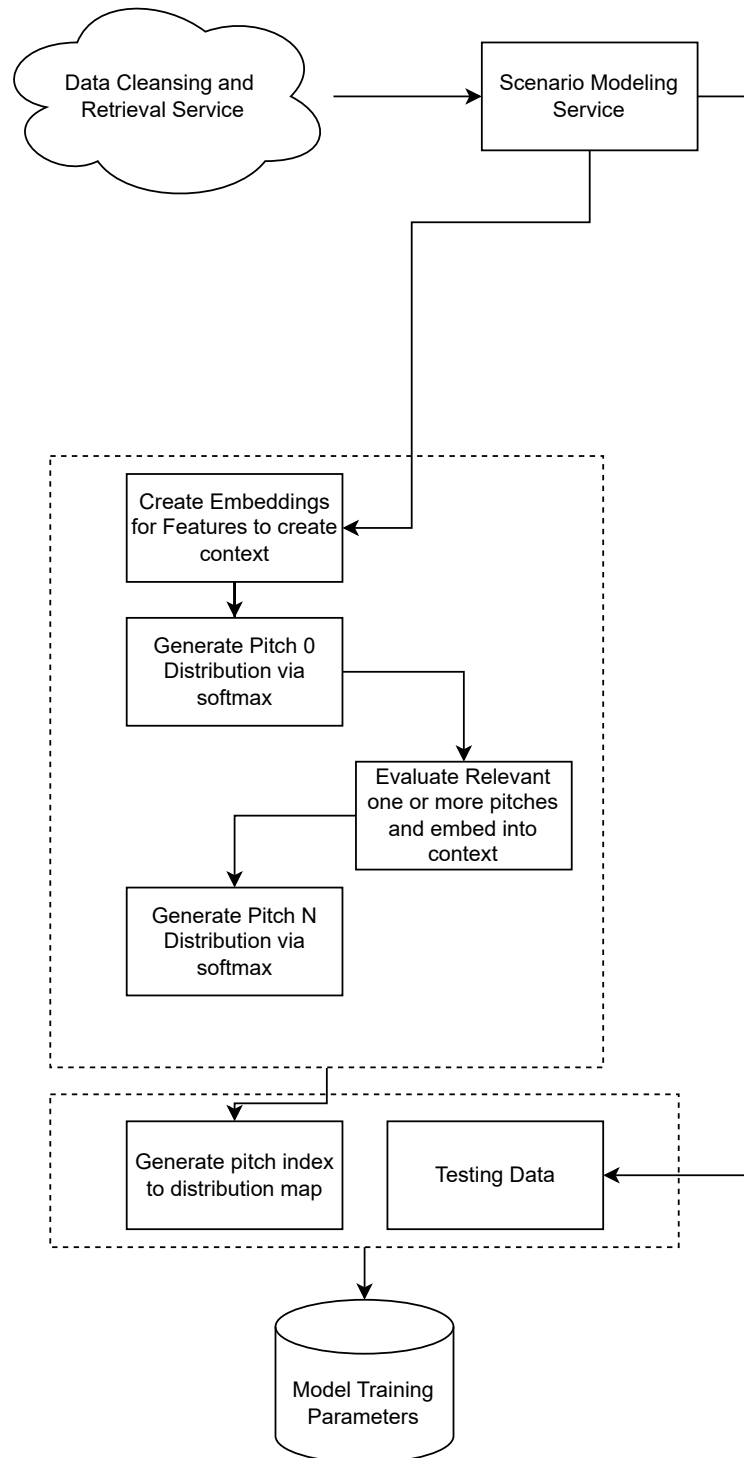

Scenario Modeling Service

To train our model, we'll need to come up with a service that models scenarios based on historical data. We'll train our model on these scenarios and then reserve some of the data for validation.

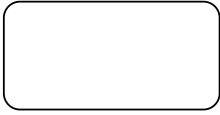

Model Layer (Training)

Comparison

Label testing with evaluations of accuracy with probability distributions. Export training results to database.

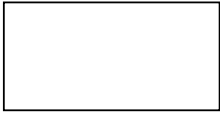

Key

Rounded Corner Box

Used to contain loops

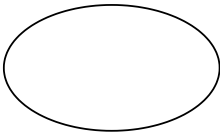

Sharp Corner Box

Used to contain process steps

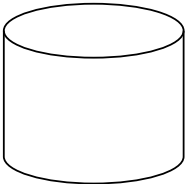

Dotted Corner Box

Used to separate process steps contained in specific services

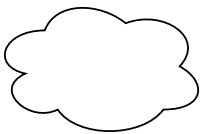

Oval

Used to specify relevant data from a database

Cylinder

Icon for database

Cloud

Icon that is used to show the reuse of an existing component from a previous graphic
